

SGT GreenX: The Future of Clean, Efficient Diesel Power

SGT GreenX is a patent-applied hydrogen fuel assist technology that injects on-demand HHO gas into diesel generators (25–4,000 kVA). Unlike restrictive exhaust filters, it improves combustion efficiency at the source to cut fuel costs and emissions simultaneously.

3–15% Reduction in Fuel Consumption

Direct fuel savings achieved through optimized combustion and increased thermal efficiency.

Up to 95% Less Particulate Matter

Drastically reduces PM 2.5, CO, and HC emissions to meet environmental standards.

Proven Performance & Savings: SGT GreenX vs. Traditional Retrofits

Feature	Traditional Retrofits (DPF/SCR)	SGT GreenX
 Fuel Impact	 Increases use (2–5%)	 Reduces use (3–15%)
 Maintenance	 Chemical refills/cleaning	 Simple water & electrolyte 
 Root Cause	 Treats exhaust damage	 Fixes incomplete combustion

Critical Infrastructure & Telecom

Powers remote telecom towers, data centers, hospitals, and commercial buildings.

Manufacturing & Heavy Industry

Optimized for backup and captive power in manufacturing plants and ports.

Construction & Mining

Reliable on-site power solutions for harsh, high-demand environments.
